SKILLS

Languages: SQL, Python

Tools: Pandas, Power BI, Tableau, Excel (VLOOKUP, PivotTables, Charts), SQL Server (SSMS), Google Sheets

SQL: Joins, CTEs, Aggregations, Window Functions, Views

Analytics: Data Cleaning, Data Validation, Data Quality, Exploratory Data Analysis (EDA), Trend Analysis, Root Cause Analysis, Data Visualization, Dashboards, KPI Reporting, Stakeholder Reporting

DATA ANALYSIS PROJECTS

Customer Churn Analysis Nov 2026

- Built a Python ETL pipeline (pandas, gspread, SQLAlchemy) that extracts 52,968 account records from Google Sheets, fixes 10+ data quality issues, and loads 51,831 clean rows into SQL Server.
- Analyzed churn drivers in T-SQL with CTEs and window functions, and found onboarding was the strongest warning sign: accounts that skipped it churned 3–4x more in every plan.
- Built a 0–20 risk score and an expected-loss model (MRR × churn chance) to rank 33,588 active accounts, producing a 640-account call list that protects up to $414K of the $1.58M MRR at risk.
- Published a 3-page Tableau dashboard showing where churn costs the most, when it happens, and which accounts to call first.

Pho Restaurant Sales Analysis Sep 2026

- Raised slow-hour revenue 10% by spotting a 1–4 PM lull during exploratory analysis on a day-by-hour heatmap, which led the owners to run a targeted promotion.
- Disproved the owners' belief that sales were slipping by analyzing a quarter of point-of-sale data (38,293 rows), which showed revenue steady at about $26K a week.
- Cleaned the raw data in SQL Server: fixed data types, rebuilt date and hour fields from a single timestamp, merged duplicate order types, and checked for negative values and inconsistent categories.
- Built a visual report in Python (Pandas) with the heatmap, top and bottom items by revenue, and the weekly revenue trend.

WA Analyst Wages: One City Pays 48% More Aug 2026

- Found Seattle-Tacoma-Bellevue analysts earn 48% more than Yakima ($130.4K vs. $87.9K) with a talent pool 124 times larger (72,210 vs. 580), answering where a company should open an analyst office.
- Cleaned the data in SQL Server, imputing missing wages and checking for outliers and duplicates, then calculated employment-weighted averages with self-joins, GROUP BY, and views.
- Built a Power BI dashboard with a custom shape map from Census Bureau shapefiles (converted to TopoJSON), bar charts, and filters that carry across pages.
- Caught a statewide employment total that didn't match the sum of its areas by validating against the raw table; documented it as a caveat rather than quietly fixing it.

EXPERIENCE

Onsite Data Lead (Project-Based) May 2026 – Jul 2026
Applause, Bellevue, WA

- Owned upstream data quality for an enterprise client, cutting rejections from about 50% to 30% in three months by auditing intake and setting corrected acceptance standards as the client kept raising its bar.
- Reduced each data collection from 15 minutes to 2 by building a web-based tool, saving about 31 hours of manual work per week across 6 teams.
- Tracked delivery KPIs in Excel for a 12-person team covering 108 venues, with weekly reports that let leadership make scheduling calls on time.
- Synced two tracking spreadsheets with VLOOKUP so data stayed consistent across both.

Data Technician II Apr 2024 – Mar 2026
Meta (contract via Qualitest), Redmond, WA

- Corrected 12,000+ records in SQL after catching an incorrect field value in the project database, keeping downstream reports accurate.
- Standardized data collection across 6 teams in Tokyo, London, and the US by writing the project SOP, making results comparable across sites.
- Turned scattered bug and feature requests into 400+ tracked tickets for 10+ stakeholder teams with an intake form and auto-routing workflow.
- Held a 99% QA accuracy rating on final deliverables by co-writing a 120-point QA test plan that caught defects before release.
- Automated collection setup on 2 device types with a shell script, cutting each run from about 5 minutes to 5 seconds.

Graduate Engineer Apr 2023 – Apr 2024
Qualitest, Kirkland, WA

- Cut a key project's total cost 50% by tracing overruns to inconsistent data collection and redesigning the approach.
- Led quality review on 5+ large-scale projects, making sure final deliverables met client accuracy standards.

CERTIFICATIONS

Google Data Analytics Professional Certificate Aug 2026

EDUCATION

Highline College, Associate of Science, Computer Science Mar 2020
