SKILLS

Languages: SQL, Python
Tools: Power BI, SQL Server Management Studio, pandas, Excel, Google Sheets
Analytics Skills: Exploratory Data Analysis, Data Cleaning, Data Visualization, KPI Reporting, Stakeholder Reporting

PROJECTS

Pho Restaurant Exploratory Data Analysis: Did Business Actually Slow Down? Sep 2026

- Drove a 10% revenue increase during the restaurant's slowest hours by identifying a 1PM to 4PM lull in a quarter's worth of point-of-sale data (38,293 rows) and partnering with the owners to launch a targeted promotion.
- Cleaned and standardized the raw data in SQL Server (SSMS), using ALTER TABLE, computed columns, UPDATE, and TRY_CAST to correct data types, rebuild time-based fields from a single timestamp, consolidate order types, and validate for negative values and inconsistent categories.
- Built a dashboard in Python (pandas, seaborn) with a day-by-hour sales heatmap, top and bottom items by revenue, and a weekly revenue trend; disproved the owners' belief that business was declining, showing revenue flat at roughly $26K per week.

Descriptive Statistics Analysis: Data Analysts in This WA City Earn 48% More Than Everywhere Else Aug 2026

- Conducted a self-directed analysis of 7,494 rows of Washington State occupational wage data to answer where a company should open a new analyst office, framed for a non-technical decision maker.
- Used SQL (self-joins, GROUP BY, views) in SQL Server to impute missing wages and calculate employment-weighted average wages across 15 labor market areas; Seattle-Tacoma-Bellevue analysts earn roughly $130.4K against a talent pool of 72,210, versus Yakima at $87.9K against 580.
- Validated the cleaned data against the raw table and caught a statewide employment total that did not sum to its labor market areas, documenting it as a stated caveat rather than quietly correcting it.

EXPERIENCE

Onsite Data Lead (Project-Based) May 2026 – Jul 2026
Applause, Bellevue, WA

- Owned upstream data quality on an enterprise client engagement where roughly 50% of submitted data was rejected on arrival; audited the intake process and set corrected acceptance standards, cutting rejections to 30% in three months.
- Quantified a manual bottleneck at roughly 56 hours per week across 6 teams and 24 daily collections, then built a web-based tool that cut each collection from 30 minutes to 2 minutes.
- Defined and tracked delivery KPIs in Excel for a 12-person team across 108 venues, reporting them weekly so leadership could make scheduling and delivery calls on a fixed timeline.

Data Technician II Apr 2024 – Mar 2026
Meta via Qualitest, Redmond, WA

- Built an end-to-end bug and feature reporting pipeline: a custom intake form that auto-created and routed each task to the right developer, turning scattered requests into 400+ tracked tickets for 10+ stakeholder teams.
- Flagged an incorrect field value in the project database and corrected it across 12,000+ entries in SQL, protecting the accuracy of downstream reporting.
- Authored a project SOP from the ground up that standardized how 6 data collection teams across Tokyo, London, and the US captured data, making results comparable across sites.

- Co-created a 120-point QA testing plan to catch defects before hardware or software reached the field, keeping a 99% QA accuracy rating on final deliverables.
- Automated manual collection setup across 2 device types with a shell script, cutting setup time per run from about 5 minutes to 5 seconds.

Graduate Engineer Apr 2023 – Apr 2024

Qualitest, Kirkland, WA

- Led the end-to-end quality review process for 5+ large-scale projects, making sure final deliverables met client accuracy standards.
- Traced a key project's cost overruns to high variance in how data was collected, then redesigned the collection approach to reduce that variance, cutting project costs by 50%.

EDUCATION AND CERTIFICATION

Google Data Analytics Professional Certificate Aug 2026

SQL, data cleaning, Tableau, Power BI

Highline College, Associate of Science, Computer Science Mar 2020
