TECHNICAL SKILLS

Languages: SQL, Python

Tools: Power BI, ShapeMap, SQL Server Management Studio, pandas, Jupyter Notebook, Excel PivotTables, Google Sheets

Analytics Skills: Exploratory Data Analysis, Descriptive Statistics, Data Cleaning & Imputation, Data Quality & Validation, Weighted Aggregation, Data Visualization, KPI Reporting, Stakeholder Reporting

PROJECTS

Restaurant Sales EDA: The Slowdown the Owners Felt Wasn't in the Data

Sep 2026

An exploratory analysis of 38,293 point-of-sale line items for a family restaurant, built in Python with pandas and seaborn

- Owners believed business was declining, so analyzed a quarter of POS data and found revenue flat at roughly \$26K per week, reframing the question from stopping a decline to growing from a stable baseline, and identified the 1PM to 4PM lull and slow Tuesdays as the specific targets for promotions.
- Built day-by-hour sales heatmaps split by dine-in and to-go to show that peak demand is driven by to-go volume, turning a staffing decision from adding servers into adding packing help at 5PM and 9PM.
- Cleaned the raw export before analysis by dropping order-level totals that would have double-counted revenue at the line-item grain, standardizing category labels, and removing 89 post-midnight records, documenting the roughly \$700 in excluded sales as a stated caveat.

Descriptive Statistics Analysis: Data Analysts in This WA City Earn 48% More Than Everywhere Else

Aug 2026

A descriptive statistics analysis of data analyst wages across Washington State, built in SQL and Power BI

- Analyzed 7,494 rows of Washington State occupational wage data to find that Seattle-Tacoma-Bellevue analysts earn roughly \$130.4K against a talent pool of about 72,210, versus Yakima's roughly \$87.9K against a pool of only about 580, a tradeoff named directly rather than forced into one answer.
- Cleaned and validated the dataset first, imputing missing wages via a self-join to each area's baseline row and checking the cleaned copy against the raw table, then caught a statewide employment total that didn't reconcile against its labor market areas and documented it as a caveat instead of quietly correcting it.

EXPERIENCE

Onsite Data Lead (Project-Based)

May 2026 – Jul 2026

Applause, Bellevue, WA

- Owned upstream data quality on an enterprise client engagement where roughly 50% of submitted data was rejected on arrival; audited the intake process and set corrected acceptance standards, cutting rejections to 30% in three months.
- Quantified a manual bottleneck at roughly 56 hours per week across 6 teams and 24 daily collections, then built a web-based tool that cut each collection from 30 minutes to 2.
- Defined and tracked delivery KPIs in Excel for a 12-person team across 108 venues, reporting them weekly so leadership could make scheduling and delivery calls on a fixed timeline.

Data Technician II (Contract)

Apr 2024 – Mar 2026

Meta via Qualitest, Redmond, WA

- Built an end-to-end bug and feature reporting pipeline: a custom intake form that auto-created and routed each task to the right developer, turning scattered requests into 400+ tracked tickets for 10+ stakeholder teams.
- Flagged an incorrect field value in the project database and corrected it across 12,000+ entries in SQL, protecting the

accuracy of downstream reporting.

- Authored a project SOP from the ground up that standardized how 6 data collection teams across Tokyo, London, and the US captured data, making results comparable across sites.
- To catch defects before hardware or software reached the field, co-created a 120-point QA testing plan used to validate rollouts, holding a 99% QA accuracy rating on final deliverables.
- Manual collection setup across 2 device types took about 5 minutes per run, so wrote a shell script to automate it, cutting setup to about 5 seconds.

Graduate Engineer

Apr 2023 – Apr 2024

Qualitest, Kirkland, WA

- Led the end-to-end quality review process for 5+ large-scale projects, achieving a 99% accuracy rating on final deliverables.
- Traced a key project's cost overruns to high variance in how data was collected, then redesigned the collection approach to reduce that variance, cutting project costs by 50%.

EDUCATION AND CERTIFICATION

Google Data Analytics Professional Certificate

August 2026

SQL, data cleaning, Tableau, Power BI

Highline College, Associate of Science, Computer Science

Graduated
