SKILLS

Languages: SQL, Python

Tools: Pandas, Power BI, Tableau, Excel (VLOOKUP, PivotTables, Charts), SQL Server (SSMS), Google Sheets

SQL: Joins, CTEs, Aggregations, Window Functions, Views

Analytics: Data Cleaning, Data Validation, Data Quality, Exploratory Data Analysis (EDA), Trend Analysis, Root Cause Analysis, Data Visualization, Dashboards, KPI Reporting, Stakeholder Reporting

DATA ANALYSIS PROJECTS

Customer Churn Analysis Nov 2026

- Built a Python ETL pipeline (pandas, gspread, SQLAlchemy) to pull 52,968 account records from Google Sheets, fix 10+ data quality issues, and load 51,831 clean rows into SQL Server.
- Used T-SQL (CTEs, window functions) to find what drives churn. Skipping onboarding was the strongest sign: those accounts churned 3–4x more on every plan.
- Built a 0–20 risk score and an expected-loss model for 33,588 active accounts and split them into at-risk and low-risk groups. At-risk accounts (score 11+) are 14% of accounts but hold $565K (36%) of the $1.58M in monthly recurring revenue (MRR) at risk.
- Published a 3-page Tableau dashboard showing where churn costs the most, when it happens, and which accounts to act on first.

Pho Restaurant Sales Analysis Sep 2026

- Found a 1–4 PM sales lull on a day-by-hour heatmap. The owners ran a promotion for those hours, and slow-hour revenue went up 10%.
- Checked the owners' worry that sales were dropping with a quarter of point-of-sale data (38,293 rows). Revenue was steady at about $26K a week.
- Cleaned the raw data in SQL Server: fixed data types, split one timestamp into date and hour fields, merged duplicate order types, and checked for negative values and inconsistent categories.
- Built a report in Python (Pandas) with the heatmap, top and bottom items by revenue, and the weekly revenue trend.

WA Analyst Wages: One City Pays 48% More Aug 2026

- Compared analyst wages and headcount across Washington to pick a city for a new analyst office. Seattle-Tacoma-Bellevue pays 48% more than Yakima ($130.4K vs. $87.9K) but has 124 times as many analysts (72,210 vs. 580).
- Cleaned the data in SQL Server (filled in missing wages, checked for outliers and duplicates) and calculated employment-weighted averages with self-joins, GROUP BY, and views.
- Built a Power BI dashboard with a custom shape map made from Census Bureau shapefiles (converted to TopoJSON), bar charts, and filters that work across pages.
- Found that the statewide employment total didn't match the sum of its areas and noted it as a caveat in the report.

EXPERIENCE

Onsite Data Lead (Project-Based) May 2026 – Jul 2026
Applause, Bellevue, WA

- Cut an enterprise client's data rejection rate from about 50% to 30% in three months by auditing intake and updating acceptance standards as the client's requirements got stricter.
- Built a web-based tool that cut each data collection from 15 minutes to 2, saving about 31 hours of manual work a week across 6 teams.
- Tracked delivery KPIs (key performance indicators) in Excel for a 12-person team covering 108 venues and sent weekly reports that leadership used for scheduling.
- Linked two tracking spreadsheets with VLOOKUP so they stayed in sync.

Data Technician II Apr 2024 – Mar 2026
Meta (contract via Qualitest), Redmond, WA

- Caught an incorrect field value in the project database and corrected 12,000+ records in SQL so downstream reports stayed accurate.
- Wrote the project SOP (standard operating procedure) for 6 teams in Tokyo, London, and the US so results could be compared across sites.
- Set up an intake form and auto-routing workflow that turned scattered bug and feature requests into 400+ tracked tickets for 10+ stakeholder teams.
- Co-wrote a 120-point quality assurance (QA) test plan that caught defects before release and held a 99% QA accuracy rating on final deliverables.
- Wrote a shell script to automate collection setup on 2 device types, cutting each run from about 5 minutes to 5 seconds.

Graduate Engineer Apr 2023 – Apr 2024
Qualitest, Kirkland, WA

- Traced cost overruns on a key project to inconsistent data collection and redesigned the process, cutting total cost 50%.
- Led quality review on 5+ large projects to make sure deliverables met client accuracy standards.

CERTIFICATIONS

Google Data Analytics Professional Certificate Aug 2026

EDUCATION

Highline College, Associate of Science, Computer Science Mar 2020
