

# JOE PARK

## Data Analyst

Kirkland, WA • [joeparkda@gmail.com](mailto:joeparkda@gmail.com) • 206-393-7479

[linkedin.com/in/sunghunp](https://www.linkedin.com/in/sunghunp) • [sunghunp.github.io/joe-portfolio](https://sunghunp.github.io/joe-portfolio) • [github.com/SunghunP](https://github.com/SunghunP)

## SUMMARY

Data analyst with a Google Data Analytics Professional Certificate and 3+ years inside Fortune 500 data programs (Meta, Amazon, Google, Microsoft). Works end to end: cleans messy source data in SQL, builds the dashboard on top of it, and hands back a recommendation a non-technical stakeholder can act on.

## SKILLS

**Data Analysis:** SQL (T-SQL, SSMS), Data Cleaning and Imputation, Weighted Averages and Aggregation, Outlier and Duplicate Detection, SQL Views, Joins and GROUP BY

**BI and Visualization:** Power BI (ShapeMap, Custom Visuals, Cross-Page Filters), Tableau, Excel (Pivot Tables, Formulas, Macros)

**Geospatial:** mapshaper.org, TopoJSON/GeoJSON, U.S. Census Bureau Shapefiles

**Other Technical:** Shell Scripting, HTML/CSS/JavaScript, Data Pipeline Development, QA Testing

**Working Style:** Stakeholder Communication, SOP and Process Documentation, KPI Tracking and Reporting

## PROJECTS

### Washington State Analyst Wage Case Study: Where Should a Company Open a New Office?

2026

Write-up: [Medium article](#) • Code and documentation: [github.com/SunghunP/wa-analyst-wage-case-study](https://github.com/SunghunP/wa-analyst-wage-case-study)

- Cleaned and validated a 7,494-row Washington State occupational wage dataset in SQL Server (SSMS), imputing missing annual wages through a self-join to each area's baseline row rather than dropping rows and losing real employment figures, and running outlier and duplicate checks before analysis.
- Caught a statewide employment total that did not reconcile against the sum of its labor market areas, contacted Washington's Labor Market Information and Research team directly to confirm the cause, and documented it as a stated caveat instead of quietly correcting the data.
- Calculated weighted average analyst wages across 15 labor market areas in T-SQL, weighting by employment so high-headcount occupations carried proportional influence, and wrapped the final logic in a reusable SQL view queried directly by Power BI.
- Built a Power BI dashboard from the ground up, including a custom ShapeMap constructed from U.S. Census Bureau shapefiles processed into TopoJSON via mapshaper.org, a ranked bar chart, and a cost-versus-talent-pool scatter plot.
- Delivered a recommendation that named the tradeoff directly rather than forcing a single answer: Yakima at roughly \$87.9K per analyst against a pool of about 580, versus Seattle-Tacoma-Bellevue at roughly \$130.4K against a pool of about 72,210.

## EXPERIENCE

### Project Coordinator (Contract, Project-Based)

May 2026 – July 2026

*Applause, Bellevue, WA*

- Tracked KPIs in Excel and reported progress to leadership in PowerPoint for a 12-person team across 108 venues, supporting scheduling and delivery decisions on a fixed timeline.
- Built an inventory management tracker in Excel across 6 teams, using formulas and pivot tables to verify hardware counts across 150 items.
- Identified a manual-process bottleneck and built a web-based automation tool (HTML, CSS, JavaScript) that cut per-collection time from 30 minutes to 2 minutes across 24 daily collections run by 6 teams, saving roughly 56 hours per week.
- Served as the direct point of contact for Amazon as the external client, coordinating stakeholder feedback and folding scope changes into a live delivery timeline.

### Data Technician II (Contract)

April 2024 – March 2026

*Meta via Qualitest, Redmond, WA*

- Built an end-to-end reporting pipeline for bug and feature tracking, covering intake, automated routing, and status tracking across 400+ tickets and 10+ stakeholder teams.
- Corrected 12,000+ flagged entries in SQL, protecting the accuracy of downstream reporting.
- Authored a project SOP from the ground up, adopted by 6 data collection teams across Tokyo, London, and the US, standardizing how data was captured across sites.
- Wrote a shell script that automated data collection setup across 2 device types, cutting setup time from about 5 minutes to about 5 seconds.
- Co-authored and executed a 120-point QA testing plan, holding a 99% QA accuracy rating on final deliverables.

### Graduate Engineer

April 2023 – April 2024

*Qualitest, Kirkland, WA*

- Led the end-to-end quality review process for 5+ large-scale projects, achieving a 99% accuracy rating on final deliverables.
- Reduced project costs by 50% on a key project through lower-variance data collection.

## EDUCATION AND CERTIFICATION

### Google Data Analytics Professional Certificate

August 2026

SQL, data cleaning, Tableau, Power BI

**Highline College**, Associate of Science, Computer Science

March 2020
